

Overview of MATCH: Mobilising Advanced Technologies for Care at Home

Prof. Ken Turner (*kjt@cs.stir.ac.uk*)
University of Stirling

27th May 2008

www.match-project.org.uk

The MATCH Project

- Mobilising Advanced Technologies for Care at Home
- Supported by Scottish Funding Council (not 100%) for four years from November 2005
- Focused on development and integration of home care technologies:
 - Home Care Networks
 - Lifestyle Monitoring
 - Speech Communication
 - Multimodal Interfaces
 - Integration and Demonstration

Partners

- Academic:
 - Universities of Dundee, Edinburgh, Glasgow, Stirling (lead)
- External Partners:
 - Social/Health Care:
Dementia Services Stirling, Falkirk Council, Hanover Housing Association, Midlothian Council, National Health Service Forth Valley, North Lanarkshire Council, West Lothian Council
 - Commercial:
British Telecom, Intermediate Technology Institute, Scottish Enterprise, Sensorium, Tunstall

Objectives

- Develop home care systems that support independent living
- Create a Scottish centre of excellence in the field of home care systems
- Establish partner networks, integrate current practices
- Develop specialised laboratories and demonstration centre to showcase advances
- Provide specialised training and guides
- Establish care models for appropriate and ethical use of the technologies

Project Philosophy

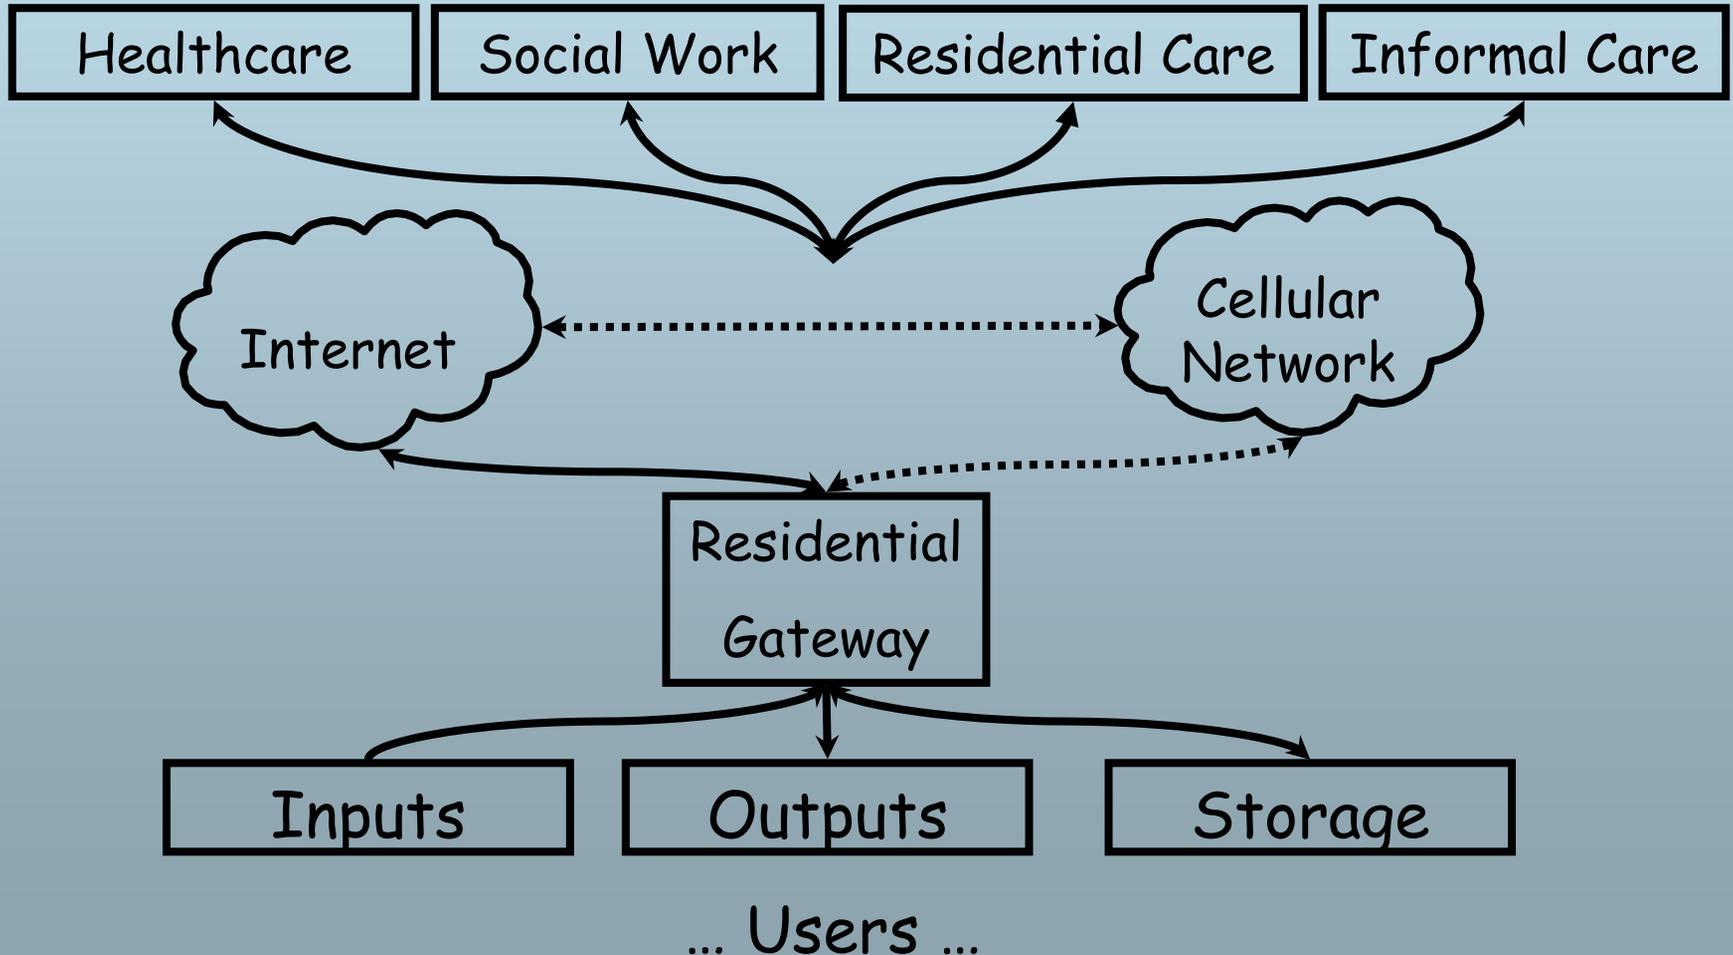

- Develop home care systems for:
 - independent living
 - care in the community
 - improved quality of life
- Use technology *as appropriate*
- Aim to deal with:
 - the real needs of users
 - what is acceptable and usable

Target Users

- Those with complex care needs:
 - the users themselves
 - their formal and informal carers
 - associated health and social care staff
- Allow authorised people to:
 - view information remotely:
alerts, behaviour patterns, well-being issues
 - modify system remotely:
changes in client needs, new services, updates

System Overview

... Carers ...

Dundee Research

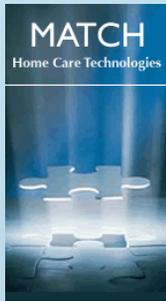

- Activity Monitoring:
 - types of activity
 - data representation
- Lifestyle Monitoring:
 - patterns of activity
 - trends in daily living
 - measures of well-being

Edinburgh Research

- Speech Input and Output:
 - speech recognition
 - speech synthesis
- Spoken Dialogue Systems:
 - booking appointments
 - help with medication
 - reminders

Glasgow Research

- Multimodal Interaction:
 - multiple interfaces (e.g. gesture, touch, audio)
 - adapting to user preferences
- System Configuration and Evolution:
 - configurable by users
 - goal-oriented
- Capturing Stakeholder Viewpoints:
 - input to home care system design
 - identifying and handling conflicting views

Stirling Research

- Home Care Networks:
 - create smart services using dumb devices
 - use off the shelf devices where possible
 - simplify installation and management
- Care Services:
 - communications infrastructure
 - care services built from common components
 - automated rules for how support is provided
